

Countertop Water Filter

The AQ-4000 Aquasana countertop water filter, featuring NSF-certified Claryum™ three-stage filtration, is the most economical way to get clean, crisp, healthy water for your family.

Remove pollutants, maintain healthy minerals

Our unique twin cartridge, three-stage filtration system uses a combination of carbon filtration, ion exchange, and sub-micron filtration. Your tap water is forced under pressure over filtration material covering more than two million square feet of surface area. So it reduces over three times more contaminants than leading pitcher filter brands.

Cartridge A

Filters sediment and turbidity

- Reduces microscopic particles
- Improves taste
- Greatly reduces odor

Filters chlorine

- Chlorine is the most concentrated and competitive chemical in tap water

Cartridge B

Filters lead and mercury

- Ion exchange reduces heavy metals
- Maintains pH levels
- Improves taste

Filters synthetic chemicals

- Herbicides
- Pesticides
- Industrial solvents

.5-micron absolute filtration

- Removes cysts

Your water becomes contaminated from a variety of sources throughout the process of collection, treatment and delivery. From groundwater contamination at the source to chemical contamination at the treatment facility to rust and lead contamination as the treated water travels through pipes to your home, the water you drink and bathe in can contain dangerous levels of harmful contamination. This continuing level of contamination makes filtering your water a critical component of maintaining your health. With the AQ-4000 Countertop water filter, Aquasana Claryum™ filtration technology stands between you and the harmful contamination present in your water supply.

The result is truly healthy, great tasting water for drinking, cooking, and preparing beverages at the convenience of your family's kitchen faucet for 10¢ a gallon on Water for Life!

NSF-certified Aquasana Claryum™ filtration features three-stage technology to reduce pollutants and maintain healthy minerals to balance pH and ensure fresh, spring water flavor.

Reduces over 50 commonly occurring contaminants including:

Product specifications:

Product dimensions: 12" x 7" x 4"

Product weight: 3 lbs

Max flow rate: 0.4 gallons per minute

Capacity of filter cartridge: 500 gallons (Item AQ-4035)

Min operating pressure: 20 psi (pounds per sq. in.)

Max operating pressure: 80 psi (pounds per sq. in.)

Min operating temperature: 40 degrees F

Max operating temperature: 90 degrees F

Water under pressure means better filtration.

After devoting 18 months to redesigning and reformulating the company's filter cartridges, Aquasana has created its most powerful and best-performing filtration systems to-date. Unique in both design and functionality, the new Aquasana Claryum™ filtration technology features three distinct stages, including activated carbon, ion exchange and sub-micron filtration. Together, this unique combination forces water under pressure over more than two million square feet of surface area of contaminant-grabbing filtration material — the equivalent of almost 35 football fields or roughly seven blocks in New York City. In addition to reducing a comprehensive list of chemicals and contaminants, Claryum's™ patent-pending selective filtration technology reduces odor and improves the taste of tap water while also preserving its healthiest minerals such as calcium, potassium and magnesium for optimum hydration — which are vital for growth, development and overall health and wellness.

Key features of the Aquasana Claryum™ technology include :

- NSF certified to standards 42 and 53
- Superior contaminant reduction from the unique triple-process filter technology
- Great taste from the healthy minerals that stay in your water
- Long lasting filters that provide 500 gallons or six months of crisp, clear, healthy water

- All at the same great value — with Aquasana filtered water costing as little as 10¢ a gallon

Aquasana drinking water filters cost less and provide better filtration.
